The EA211 evo is the further development of Volkswagen AG's EA211 petrol engine series. The series comprises engines with three and four cylinders and has been used in various vehicles since 2017. Around four million units roll off the production line every year. Since 2022, the engine has been available in the second expansion stage 'evo2', which is used in almost every vehicle of the VW Group. The basic design of the engine has remained the same over the years, but the details have changed. For example, the combustion process has been adapted and the cubic capacity increased. The engine is used in every third VW built worldwide. The engine is now being adapted for the Euro 7 standard.
